

CSI 436/536 (Spring 2025) Machine Learning

Lecture 5: Elements of Machine Learning

Chong Liu

Department of Computer Science

Feb 5, 2025

Announcement

- Study group has been finalized.
 - Start working on Homework 1.

Group course project registration due today.

- Instructor office hour change next week
 - Tue Feb 11 at 11am-12pm => Mon Feb 10 at 1-2pm
 - Effective only next week
 - TA office hour doesn't change

Recap: review of probability and statistics

- Probability
 - Basic concepts
 - Probability properties
 - Random variable and distribution
 - Expectation and variance
 - Independence
 - Bernoulli distribution and Gaussian distribution
- Statistics
 - Maximum likelihood estimation

Maximum likelihood estimation

- Used since Gauss, Laplace, Carefully analyzed by Ronald Fisher.
- Key idea:
 - Which distribution is more *likely* to have produced the data?
 - $\max_P f_{\text{Data} \sim P}(\text{Data})$
 - Example: $X_1, X_2, \dots, X_n \sim D_{\theta}$
 - $\max P(X_1, X_2, ..., X_N | \theta)$
- Observation 1: If the data is i.i.d. then by independence the density factorizes
 - $P(X_1, X_2, ..., X_N | \theta) = P(X_1 | \theta) P(X_1 | \theta) ... P(X_1 | \theta)$
- Observation 2: Taking log does not change the solution.
 - $\max P(X_1, X_2, ..., X_N | \theta) \leftrightarrow \max \log P(X_1, X_2, ..., X_N | \theta)$

Estimating the mean parameter of a Gaussian distribution

Data

$$X_1, ..., X_n \stackrel{i.i.d.}{\sim} \mathcal{N}(\mu, \sigma^2)$$

• Likelihood:

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left(-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2\right)$$

• The MLE problem:

$$\hat{\mu} = \arg\max_{\mu \in [0,1]} \prod_{i=1}^{n} \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{(X_i - \mu)^2}{2\sigma^2}}$$

Today

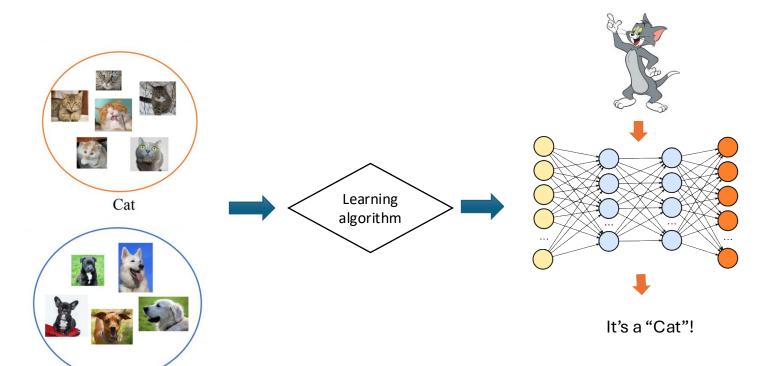

Machine learning overview

Supervised learning: Binary classification

Feature design and feature extraction

• Example of classifier: Decision Trees

Recap: Machine learning studies "computer programs that automatically improve (its performance on a task) with experience."

Dog

Discussion: In this example

- What's the performance?
- What's the task?
- What's the experience?

Discussion: How do we learn?

• Learning from ...

 What does it mean to have learned something?

Different tasks / problems in Machine Learning

Supervised Learning

Spam Filter.

Unsupervised Learning

Topics of a text corpus

• Reinforcement Learning

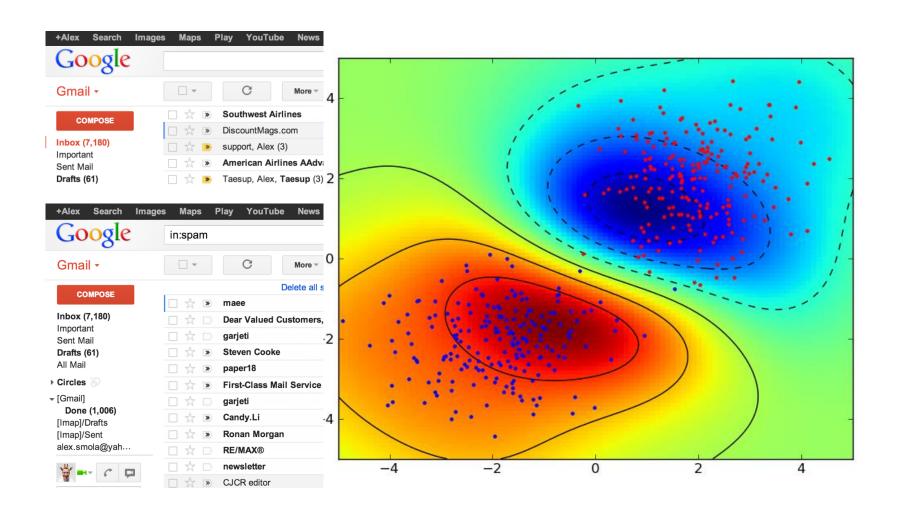

Atari Games. Serve Ads.

Structured Prediction

Machine translation.

Semi-supervised learning, active learning, ranking /search / recommendation self-supervised learning and many more!

Supervised learning is about predicting labely using feature x by learning from labeled examples.

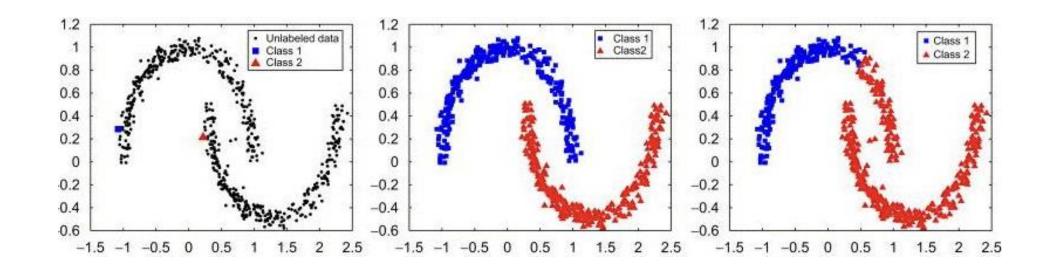

Unsupervised Learning is about finding structures in an unlabeled dataset.

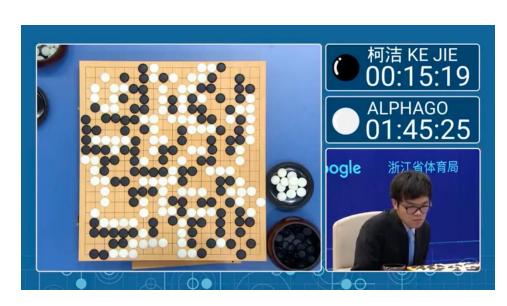

"Arts"	"Budgets"	"Children"	"Education"
NEW FILM SHOW MUSIC MOVIE PLAY MUSICAL BEST ACTOR	MILLION TAX PROGRAM BUDGET BILLION FEDERAL YEAR SPENDING NEW	CHILDREN WOMEN PEOPLE CHILD YEARS FAMILIES WORK PARENTS SAYS	SCHOOL STUDENTS SCHOOLS EDUCATION TEACHERS HIGH PUBLIC TEACHER BENNETT
FIRST YORK OPERA THEATER ACTRESS LOVE	STATE PLAN MONEY PROGRAMS GOVERNMENT CONGRESS	FAMILY WELFARE MEN PERCENT CARE LIFE	MANIGAT NAMPHY STATE PRESIDENT ELEMENTARY HAITI

The William Randolph Hearst Foundation will give \$1.25 million to Lincoln Center, Metropolitan Opera Co., New York Philharmonic and Juilliard School. "Our board felt that we had a real opportunity to make a mark on the future of the performing arts with these grants an act every bit as important as our traditional areas of support in health, medical research, education and the social services," Hearst Foundation President Randolph A. Hearst said Monday in announcing the grants. Lincoln Center's share will be \$200,000 for its new building, which will house young artists and provide new public facilities. The Metropolitan Opera Co. and New York Philharmonic will receive \$400,000 each. The Juilliard School, where music and the performing arts are taught, will get \$250,000. The Hearst Foundation, a leading supporter of the Lincoln Center Consolidated Corporate Fund, will make its usual annual \$100,000 donation, too.

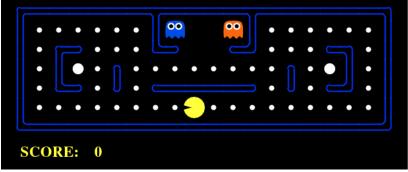

Semi-supervised Learning using both labeled and unlabeled data.

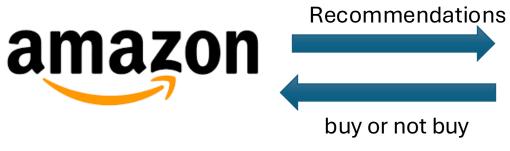

Reinforcement learning learns to make decisions for long-term rewards by trials-and-errors.

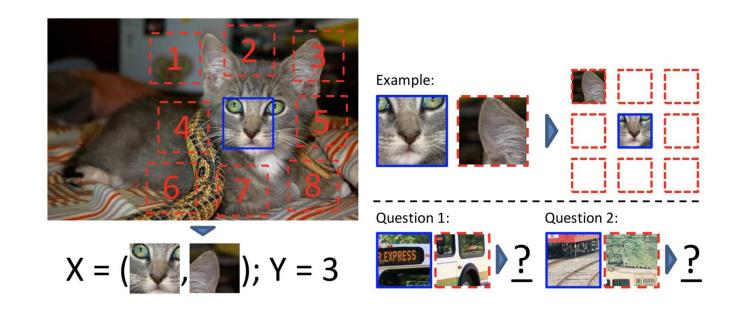

Self-supervised learning learns to predict parts of x using other parts of x.

Randomly masked

A quick [MASK] fox jumps over the [MASK] dog

Predict

A quick brown fox jumps over the lazy dog

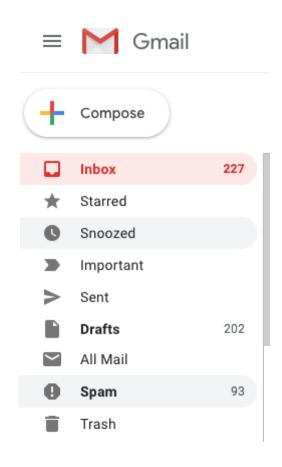

Summary of different ML problems

ML problem	Input	Output	What do we learn?	Applications	This course
Supervised learning	$[(x_1, y_1),, (x_n, y_n)]$	\hat{y} , given new x	Mapping $g: X \to Y$	Price prediction	13 lectures
Unsupervised learning	$[x_1, \dots, x_m]$	Task dependent	Structural information of X	Biotech (dimension reduction)	3 lectures
Semi- supervised learning	$[(x_1, y_1),, (x_n, y_n)]$ and $[x_1,, x_m]$	\hat{y} , given new x	Mapping $g: X \to Y$	Large-scale ML	N/A
Reinforcement learning	An open environment where the learner can select x	A sequence of selected $[x_1,, x_n]$ and their associated rewards $[y_1,, y_n]$	Good policy to make decisions in selecting <i>x</i>	Material/drug discovery	1 lecture
Self- supervised learning	An incomplete sequence <i>x</i>	A complete sequence \hat{x}	Good policy to fill the unknown part	Natural language (email auto filling)	N/A

The focus of today's lecture is "Supervised Learning"

- Actually, just "binary classification".
- Typical Example: Spam filtering
 - Design an "agent" to look at my email
 - And predict whether it is "Spam" or "Ham"

Example of SPAM emails

Mail thinks this message is Junk Mail.

CUSTOMER SERVICE:

FRIEDRICHSTRARE 10,BERLIN ALEMANHA REFERENCE NUMBER: MBB-009-D54-DE BATCH NUMBER: MGC-2019- SM-009 TICKET NUMBERS: 2,6,13,21,26,32

OFFICIAL WINNING NOTIFICATION.

We are pleased to inform you of the released results of Microworld Promotion... This is a promotional program organized by Microworld Corporations, in conjunction with the Foundation for the promotion of software products, and use of email addresses. Held on Thursday 19th, December 2019, in Berlin, Alemanha.

Your email address won a cash award of Four hundred and eighty eight thousand two hundred and fifty euros (488,250.00 Euros)..

Contact Our Foreign Transfer Manager for claims with your winning details and your contact information.

Mrs. Helena Bosch.

Email: micropromo19@yahoo.com

Congratulations!! Sincerely.

Rosa Van Beek.

Example of a HAM (non-spam) email

Discussion: What are the features that we can use to describe an email?

• What are characteristics of spam and ham emails?

 What are the information that we can extract from text, and hypertexts to describe an email?

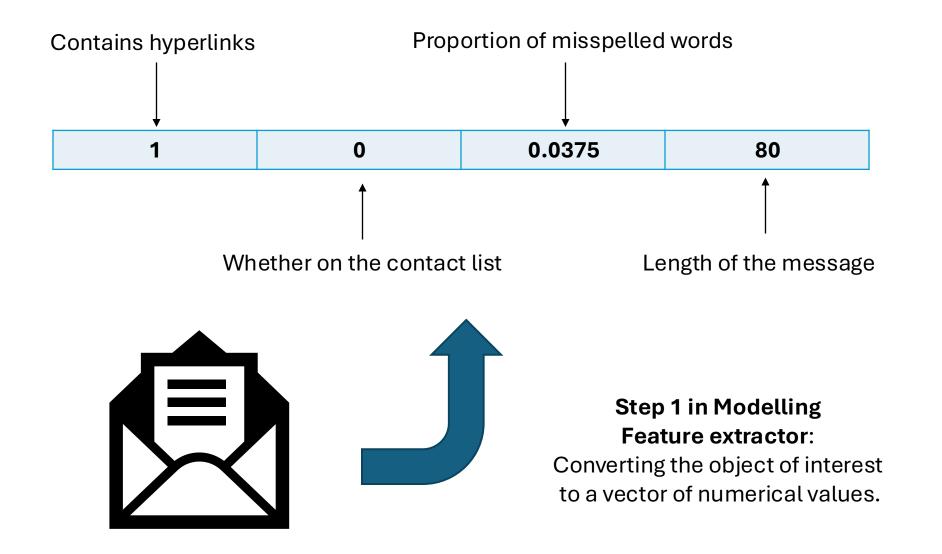

What are typical characteristic of a spam email?

Possible features

- Number of special characters: \$, %
- Mentioning of: Award, cash, free
- Greetings: generic, or specific
- Bad grammars and misspelled words: e.g. m0ney, c1ick here.
- Excessive excitement: Many "!", "!!!", "?!", words in CAPITAL LETTERS.

- Whether the senders on the contact list
- Length of an email
- Whether the receiver has responded to sender before

Example of a feature vector of dimension 4

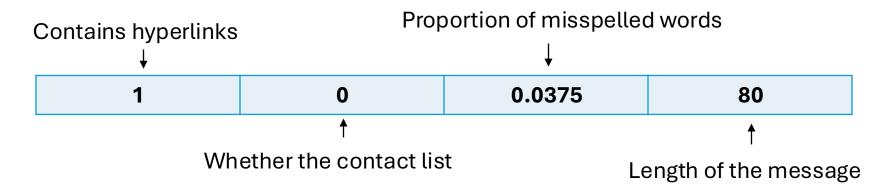

Mathematically defining a classifier

• Feature space: $\mathcal{X} = \mathbb{R}^d$

• Label space: $\mathcal{Y} = \{0, 1\} = \{\text{non-spam}, \text{spam}\}$

ullet A classifier (hypothesis): $h:\mathcal{X} o\mathcal{Y}$

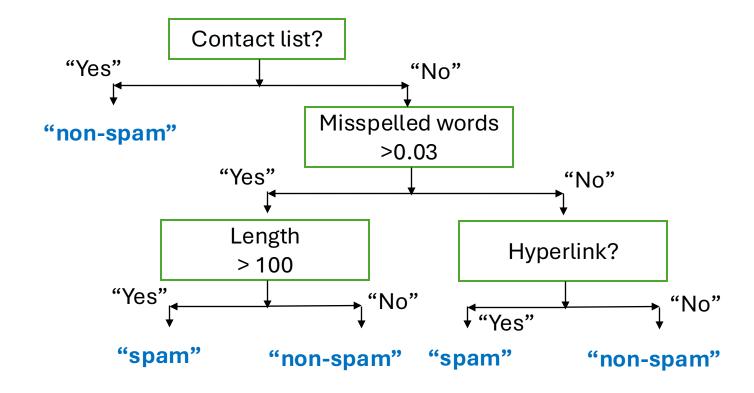

How do we make use of this feature vector? What is a reasonable "classifier" based on this feature representation?

- Feature space: $\{0,1\} imes \{0,1\} imes \mathbb{R} imes \mathbb{N}$
- Label space: $\mathcal{Y} = \{0, 1\} = \{\text{non-spam}, \text{spam}\}$

Discussion: How are we going to use these features as a human?

Decision trees

• Question: How is each decision tree determined? What are its parameters?

How is a decision tree specified?

- Parameters (built-in parameters of a model)
 - Which feature(s) to use when branching?
 - How to branch? Thresholding? Where to put the threshold?
 - Which label to assign at leaf nodes?

- Hyperparameters (parameters that you can set)
 - Max height of a decision tree?
 - Number of features the tree can use in each branch?
